
NOTES ON ARTICLE CONTRIBUTORS

Sylvia Abonyi is in her second year of the Ph.D. program in Anthropology at McMaster University. Her research is concerned with the interplay of biological, cultural, environmental, economic, and political factors in the production of human health. S. Abonyi's Ph.D. dissertation will investigate the relationship between dietary change and the increasing prevalence of diabetes in a northern Ontario First Nations community.

Marion Maar is in her second year of McMaster University's Ph.D. in Anthropology program. Her current research interests are in the area of applied medical anthropology and she is presently studying the relationship between Canadian Aboriginal health care policies and Aboriginal community initiatives in health care.

Gary Spencer is a first year M.A. student in the School of Human Biology and Nutrition at Guelph University.

Alison Gray is in her final year of the M.A. program in Anthropology at McMaster University. Her M.A. thesis, currently underway, is concerned with the study of infant health in mid-19th century southern Ontario.

Laura Gorczynski is a fourth year Honours Anthropology and Psychology student at McMaster University. On completing her current program she is hoping to pursue graduate studies in Forensic Anthropology and Paleopathology.

Tina Moffat is a Ph.D. candidate with McMaster University's Department of Anthropology. She has recently conducted fieldwork among a peri-urban community of carpet workers in Kathmandu, Nepal. Her dissertation examines the health and nutrition of the pre-school children of women working in the carpet-making industry.
